

# Kleros Evidence Provider

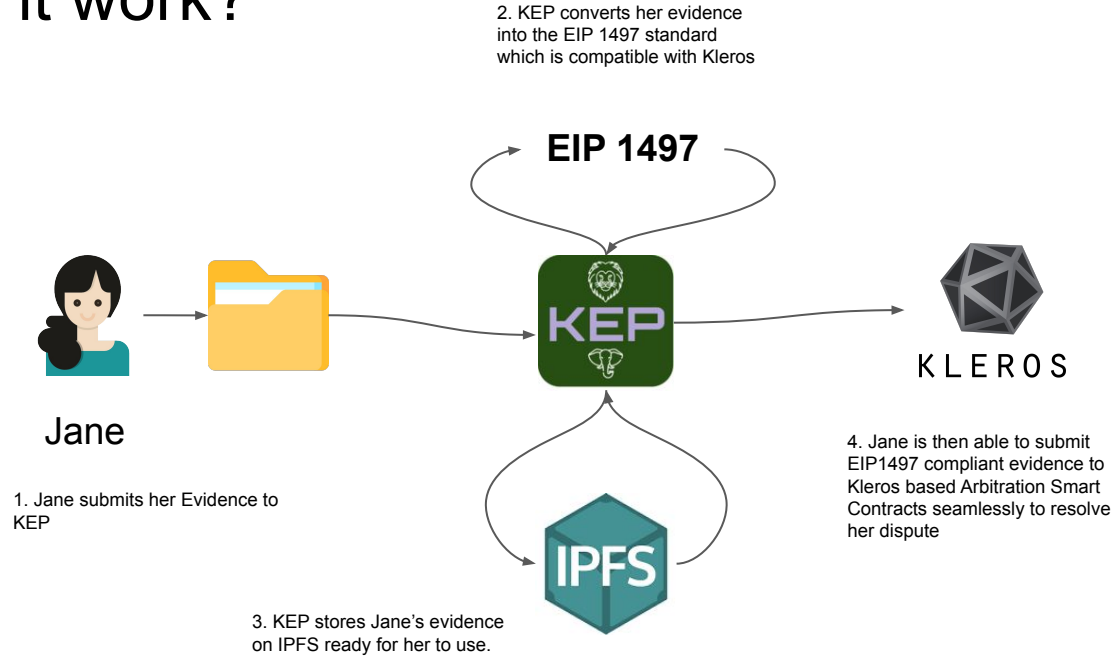

Strengthening Decentralised Arbitration

# Introduction

The Kleros Evidence Provider (KEP) has been created to provide a way for users of the Kleros protocol to better manage their Evidence submissions during decentralized disputes. The view is that for small claims Evidence Management isn't an issue, however for large claims of high net worth and serious complication, it becomes vital to manage and attest the submitted evidence.

This is KEP. KEP provides focused on chain management of Evidence allowing for agency i.e. delegation and thus preserving the security chain and audit trail, because simply in a high value case it is imperative there is no sharing of keys of any kind.

# How does it work?
